Pred. No. is the number of results predicted by chance to have a em\_htgo\_mus:\* em\_htgo\_other:\*

em\_htgo\_hum:\*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

* NOTE: This is a 'working draft' sequence. It currently consists of 34 contigs. The true order of the pieces

* is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence.
                                                                                                                                                                                             as soon as it is available and the accession number will be preserved.

Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical agents.

Example 1; Page 307; 341pp; English.

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAY90681-Y90681), and to DNA encoding them (AAA30709-A30703 and AAA30775-A30779). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (CIG) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X- (AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or

LE Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be condopenous, non-endopenous, or a mixture of endogenous and non-endopenous contained and partial agonists are useful for identifying antagonists, agonists and partial agonists for use as pharmaceutical companies. The mutant proteins are also useful in research settings for clucidating the roles of the receptors in normal and diseased conditions. Antagonists for a particular GPCR are useful for treating diseases and clisometra seconds with that receptors. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence compounds without the need for endogenous ligands. The present sequence compounds without have nown wild-type GPCR used in an exemplification of the invention. This was cloned and subjected to sitedirected mutagenesis (SDM) to generate DNA encoding the corresponding the curresponding compand to the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to screening a test compound to determine whether the compound is a GPR40 receptor (G protein-coupled receptor) ligand comprises detecting whether the test compound competitively inhibits the binding of a fatty acid GRR40 ligand to a GPR40 receptor. Also included are (1) a method of screening a compound for GPR40 antagonist activity, comprising; (a) measuring any detectable signal produced by a reporter gene (comprising a reporter gene under the control of G protein Gq responsive transcriptional element); (b) detecting a decrease in reporter gene expression in the presence of both test compound and agonist; or (c) detecting whether the compound decreases glucose-stimulated insulin release from mammalian pancreatic beta cells in the presence of a GPR40 agonist; (2) a method of screening a compound for GPR40 agonist; (2) a method of screening any

GPR40 and increases glucose-stimulated insulin release from mammalian pancreatic beta cells. The method is useful for identifying GPR40 antagonist or agonist compounds for treating disorders e.g. type 2 diabetes, obesity, glucose or insulin intolerance, neurodegenerative disease (e.g. Alzheimer's disease) or stroke. The present sequence is the human cDNA for GPR40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CCGCTCAACGTCCTGGCCATCCGAGGCGCGACGCCCACGCCCGGCTCCGTCTCACCCCT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
```

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or aridity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific antibody seaned of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, or autoimmune diseases, growth-related diseases, cell regeneration-related diseases, cell are therosclerosis, bacterial, fungal, prococoan or viral infections, osteoprorosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, graft versus host antiet, antiet, depression, schizophrenia, debenetia, memory classes, epilepsy, asthma, tuberculosis, obseivy, nausea, hypertension, or anxiety, or candiomyopathy, rausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or

The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GPCR) that transmembrane-6 (TM6) region and an intracellular-3 (IC3) region, by substituting a specific amino acid in the TM6 region with a different amino acid, and testing for constitutive cartivity. The method is useful for creating a constitutively active version of an endogenous human GPCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GPCR polypeptides are useful for screening test compounds for identification of inverse agonises or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCRs may also be used in vivo or in vitro in biological research. A nucleic acid encoding the altered GPCR may be used to create a transgenic animal expressing the altered GPCR. The method allows screening for compounds that modulate the activity of a human G protein-coupled receptor without the need for provision of a ligand for the receptor. This is particularly useful in allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Creating a constitutively active version of an endogenous human G protei coupled receptor (GPCR) comprises substituting a specific amino acid in the transmembrane-6 region with a different amino acid, and testing for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  screening of compounds against orphan receptors for which no ligand is currently known. This sequence represents cDNA encoding a human GPCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATGGACCIGCCCCCGCAGCICTCCTTCGGCCTCTATGTGGCCCCCTTTGCTGGCCTTCT

The invention relates to a novel screening method comprising a fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, originating in mouse, rat, crab-eating monkey and hamster (sequences fully defined in the specification), equivalent proteins of similar activity, and peptides containing partial sequences of the GPR40 protein. The novel fatty acid and GPR40 protein and their compositions have the following activities: antidiabetic, anabolic, neuroprotective, nephrotropic, ophthalmological, antilipaemic, dermatological, entiarteriosclerotic, antiarthritic, osteopathic, thrombolyvic, nootropic, anorectic, hypotensive, and cytostatic. The novel fatty acid and eicosanoid-binding G-protein coupled receptor protein, GPR40, and clarker compositions can be used in the treatment, prevention and diaphetic retinopathy, hyperlipaemia, skin diseases, compinately, diabetic retinopathy, hyperlipaemia, skin diseases, arthritis, bone diseases, arteriosclerosis, thrombosis, hypertension, indigestion, memory loss, obesity, hypoglycaemia, edema, insulin allergy, fat metabolism disorders and cancer. This polymulectide sequence represents the DNA encoding a human GPR40 protein

```
The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90693-AAY90693-AAY90693-AAY90693-AAY90693-AAY90693-AAY90693-AAY9073 and AAY90693-Y90687), and to DNA encoding them (AAA30775-AA9079). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acid N-terminal of an endogenous proline in TM6 to form a sequence X-CC (AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous creatiques. The constitutively active GPCRs are useful for identifying antagonists and partial agonists for use as pharmaceutical creatiques the roles of the receptors in normal and diseases and discating the roles of the receptors in normal and diseases and discates associated with that receptors. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. Sequences AAA30779-CAAA30779 represent DNAS encoding the mutant human

The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GPCR) that has a transmembrane-6 (TM6) region and an an intracellular-3 (IC3) region, by substituting a specific amino acid in the TM6 region with a different amino acid, and testing for constitutive cativity. The method is useful for creating a constitutively active version of an endogenous human GPCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GPCR polypeptides are useful for screening test compounds for identification of inverse agonists or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCRs may also be used to create a transgenic animal expressing the altered GPCR. The method allows screening for compounds that modulate the activity of a ligand for the receptor. This is particularly useful in allowing conservant or screening of compounds against orphan receptors for which no ligand is currently known. This sequence represents conding a human GPCR.
                           Creating a constitutively active version of an endogenous human G protein coupled receptor (GPCR) comprises substituting a specific amino acid in the transmembrane-6 region with a different amino acid, and testing for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GICTITIGGGITGGAGGCTCCAGGAGGCTGGCTGGACCACCAGCAACACCTCCCTGGGCATC
